Higher Studies in Australia and Cybersecurity Research Opportunity

Mawlana Bhashani Science and Technology University (MBSTU), through its **Career Club**, regularly hosts **open educational events** that are accessible to the general public, including students, graduates, and professionals from outside the university.

A notable example is the seminar titled **"Higher Studies in Australia and Cybersecurity Research Opportunity"**, held on **10 December 2024** at MBSTU. The event featured **Dr. Ziaur Rahman**, PhD in Cybersecurity, RMIT University, Melbourne, Australia, who shared valuable insights on **Australian higher education systems, scholarship opportunities, and emerging research areas in cybersecurity**. The session included interactive Q&A discussions, informative presentations, and direct guidance on pursuing international academic and research opportunities.

The program was **open to external participants**, welcoming not only MBSTU students but also graduates and individuals from nearby institutions who are interested in global education and research. All attendees received **participation certificates**, while quiz winners were rewarded with gifts to encourage engagement.

This seminar exemplifies **MBSTU's commitment to providing open and inclusive educational experiences** beyond its enrolled students. By hosting public academic lectures and community learning events, the university actively contributes to **SDG Target 4.3.2**, ensuring access to quality learning opportunities for the wider community.
