Mawlana Bhashani Science and Technology University
Santosh, Tangail – 1902, Bangladesh.

Progress on SDG11 [Sustainable Cities and Communities]

Mawlana Bhashani Science and Technology University (MBSTU) is actively dedicated to advancing SDG 11, which aims to make human settlements inclusive, safe, resilient, and sustainable. This commitment is primarily fulfilled through its academic programs, particularly in environmental science, which equip students with a strong foundation to understand and address complex urban and environmental challenges. Furthermore, MBSTU is engaged in targeted research initiatives that directly promote sustainability and resilience, with a focus on environmental conservation and infrastructure development. The university translates this commitment into tangible support for its community through several initiatives, including operating the Mawlana Bhashani Jadughar (Museum) for public access and cultural preservation, and providing public access to its Central Library for researchers and visitors. The university also supports sustainable infrastructure by providing affordable housing for both its employees and its students, and promoting accessible public transport via a shuttle bus service for students, faculties, and staff. Finally, MBSTU enriches the cultural life of the surrounding region through its contribution to local arts via annual public performances of university choirs and theatre groups.
