Progress on SDG3 [Good Health and Well Being]

Mawlana Bhashani Science and Technology University (MBSTU) has actively advanced SDG 3: Good Health and Well-being during 2024 by integrating health-focused efforts across its core functions. Academic programs of the university, particularly in the Faculty of Life Science, directly support health promotion by addressing diverse health issues, including infectious disease, epidemiology, medicine, food safety and environmental impacts on public health. Furthermore, MBSTU engaged in several research projects specifically targeting health-related issues, contributing to real-world solutions and knowledge creation. More than 50 research articles related to this specific SDG were published in Scopus indexed journals during 2024. On campus, the university provided essential student health services and wellness programs to ensure the well-being of its population. Importantly, MBSTU extended its impact beyond the campus through community outreach activities focused on health. All these efforts, including student services, research, and outreach, demonstrate the commitment of the university to transparency and measuring the practical outcomes of its contribution to promoting healthier lives.
