Mawlana Bhashani Science and Technology University
Santosh, Tangail – 1902, Bangladesh.

Progress on SDG9 [Industry, Innovation and Infrastructure]

Mawlana Bhashani Science and Technology University (MBSTU) demonstrates a strong alignment with SDG 9 by focusing its core activities on advancing technological skills, promoting research, and engaging with the industrial sector. Primary contribution of the university is through its specialized academic framework, offering programs in science, engineering, and technology that directly develop the critical skills necessary to advance the infrastructure and industrial sectors. This commitment to innovation is significantly reinforced by the research success of the university, demonstrated by multiple research grants from national organizations, like Ministry of Science and Technology, Ministry of Education, University Grants Commission, Bangladesh Food Safety Authority; and also, from many industry sources targeting engineering and health sectors. These funding fuels high-impact activities, resulting in a significant increase in research output and Scopus-indexed publications. Furthermore, MBSTU adopts crucial collaborations by maintaining strong partnerships with industries, NGOs, and international institutions across the USA, Japan, and Saudi Arabia, facilitating joint technology development and transfer. The success of its alumni in leading global companies and top universities further showcases the effective role of the university in creating a skilled workforce that drives innovation and sustainable industrial growth, directly contributing to the goals of SDG 9.
